INTRODUCTION

Adebass Base Edge Consult FX

Building Traders From the Base Up. Sharpening Them at the Edge.

Adebass Base Edge Consult FX (ABEC FX) was founded on a simple but powerful belief: Great traders are not born — they are built from a strong foundation.

In a world where many chase quick profits, signal services, and shortcut strategies, ABEC FX focuses on what truly creates long-term success — structure, discipline, psychology, and repeatable systems.

> *We do not train gamblers. We develop calculated decision-makers.*

ABEC FX CORE PRINCIPLE

At ABEC FX, trading is approached as a professional skill — one that can be learned, refined, and mastered through the right guidance and consistent practice.

OUR PHILOSOPHY

> *The market rewards preparation, not emotion.* Every movement leaves clues — through trend behavior, volatility, liquidity, and timing. Our role is not to predict blindly, but to read these clues and respond with precision.

ABEC FX EMPHASIZES

- ✓ Structured trade plans
- ✓ High-probability setups
- ✓ Risk management mastery
- ✓ Multi-timeframe analysis

- ✓ Emotional control
- ✓ Patience and execution discipline

Because consistency is never an accident — it is engineered.

WHY 'BASE EDGE'?

Before any structure can stand tall, it must sit on a solid base. Many traders fail not because trading is too difficult, but because their foundation is weak.

At ABEC FX, we reverse that pattern — ensuring every student understands *why* a trade is taken, not just when to enter. The 'edge' is what separates a disciplined trader from a reactive one.

WHEN YOUR BASE IS STRONG

FEAR Reduces. Knowledge replaces it.	**DECISIONS** Become clearer. Structure removes hesitation.
LOSSES Become manageable. Risk control protects you.	**PROFITS** Become repeatable. Systems replace luck.

OUR MISSION

To transform aspiring traders into disciplined market professionals capable of navigating volatility with clarity and confidence.

WHO THIS HANDBOOK IS FOR

- ☐ A beginner seeking clear direction and a structured starting point
- ☐ An intermediate trader struggling with consistency and emotional control
- ☐ A developing professional refining their edge for real market conditions

> Do not rush this material. Study it. Revisit it. Apply it. **Build your base, sharpen your edge — and the markets become far less intimidating.**

Welcome to Adebass Base Edge Consult FX (ABEC FX)

01

WORKBOOK · INTRODUCTION

Your Foundation Assessment

EXERCISE 01

Why did you decide to learn trading? Write your honest and complete answer below.

Hint: Think beyond money — what is the deeper reason?

EXERCISE 02

Before this handbook, what was your biggest weakness or fear as a trader?

Hint: Be honest — identifying the problem is the first step to fixing it.

TICK EVERY ABEC FX PRINCIPLE THAT CURRENTLY CHALLENGES YOU MOST

- ☐ Structured trade plans
- ☐ High-probability setups
- ☐ Risk management mastery
- ☐ Multi-timeframe analysis
- ☐ Emotional control
- ☐ Patience & execution discipline

RATE YOUR CURRENT FOUNDATION (1 = Weak · 5 = Very Strong)

DISCIPLINE	1	2	3	4	5

EMOTIONAL CONTROL	1	2	3	4	5
RISK MANAGEMENT KNOWLEDGE	1	2	3	4	5
PATIENCE	1	2	3	4	5

REFLECTION · Take your time with this.

What does 'trading from a solid base' mean to you personally? How will you apply that mindset differently after reading this handbook?

✦ COMMITMENT ✦

"I commit to studying this material with discipline, applying every concept before moving forward, and building my trading from a position of knowledge — not emotion."

DATE

CHAPTER 01

Before you read a single candle, your chart must be set up correctly.

BOLLINGER BANDS

MOVING AVERAGE — SIMPLIFIED (SMA)

MOVING AVERAGE — EXPONENTIAL (EMA)

Once configured, your chart will show: three green lines (Bollinger Bands), one red line (SMA), and one blue line (EMA). If you see all five lines — you are ready.

CHART — BOOM 1000 H1 WITH ALL INDICATORS CONFIGURED

LIVE CHART: FULL INDICATOR SETUP

Boom 1000 Index — H1 | Bollinger Bands (green) · SMA (red) · EMA (blue)

INDICATOR	TYPE	PERIOD	COLOR	ROLE
Bollinger Bands	Bands	20	Green	Price boundaries & volatility
Moving Average	Simplified (SMA)	10	Red	Short-term trend direction
Moving Average	Exponential (EMA)	10	Blue	Fast momentum indicator

WORKBOOK · CHAPTER 01

Indicator Configuration Workbook

TASK 01 · OPEN MT5 AND CONFIGURE ALL THREE INDICATORS. TICK EACH ONCE DONE

- [ ] Bollinger Bands added — Period 20, Deviation 2, Color: Green
- [ ] SMA added — Period 10, Color: Red
- [ ] EMA added — Period 10, Color: Blue
- [ ] All 5 lines clearly visible on my chart
- [ ] Chart set to H1 or M30 timeframe

EXERCISE 02

Describe what each of the 5 lines looks like on your chart right now. Be specific.

Hint: Color, position relative to candles, how it's moving

EXERCISE 03

Why do we use TWO moving averages instead of just one?

Hint: Think about speed of reaction — what does each one tell you that the other doesn't?

PRACTICE TABLE · FILL IN FROM MEMORY WITHOUT LOOKING AT THE HANDBOOK

LINE	COLOR	PERIOD/TYPE	WHAT IT TELLS ME

REFLECTION · Take your time with this.

Looking at the chart you just configured — what do you notice about where price is in relation to the three Bollinger Bands? What might this suggest?

04

CHAPTER 02

Understanding Moving Averages

A tool that removes noise and reveals direction. Simple to read. Powerful when respected.

A Moving Average calculates the average price of an asset over a specific period — updating continuously. It filters out short-term noise and reveals the underlying trend.

TWO ANALOGIES

SCHOOL GRADES

Imagine checking your average grade over the last 5 tests. Every new test drops the oldest and re-averages the latest 5. That rolling average reveals whether your trend is improving or declining.

WEATHER AVERAGE

A 7-day temperature average tells you whether it's getting hotter or colder overall. The MA does the same for price — smoothing spikes to reveal the genuine direction.

RED VS BLUE LINE

RED LINE — SMA

Simple Moving Average. Pure average of the last 10 periods. Slower to react — giving a stable, noise-free read on trend direction.

BLUE LINE — EMA

Exponential Moving Average. Weights recent prices more, so it reacts faster. It signals momentum shifts before the SMA catches up.

THE THREE POSSIBLE TRENDS

↑ UPTREND

MA clearly curving upward. Price building higher. Follow it — trade Crash.

↓ DOWNTREND

MA curving down. Price declining. Follow it — trade Boom.

→ SIDEWAYS

MA flat. No clear direction. Stay out — no trade.

A moving average filters out the random ups and downs and shows whether the market is trending up, down, or going nowhere.

05

WORKBOOK · CHAPTER 02

Moving Average Mastery Workbook

EXERCISE 01

Explain the difference between the SMA and EMA in your own words — as if teaching a friend who has never traded.

Hint: Focus on: what each measures, and how fast they react to price changes

PRACTICE DRILL · OPEN 5 CHARTS. RECORD YOUR MOVING AVERAGE OBSERVATIONS BELOW

CHART / INSTRUMENT	TIMEFRAME	RED MA DIRECTION	BLUE MA DIRECTION	TREND = ?

REFLECTION · Take your time with this.

On the charts you just checked — on which ones did the red and blue lines clearly agree? On which ones did they seem to conflict? What does conflict between the two MAs tell you?

SCENARIO TEST · Which of these setups shows a valid TREND to trade?

A	Red MA curving up, Blue MA curving up, both parallel — Crash setup	VALID ✓
B	Red MA pointing down, Blue MA still pointing slightly up — unclear	INVALID ✗
C	Both MAs completely flat and tangled together — no trade	INVALID ✗
D	Blue MA just crossed above Red MA and both curving up — Crash entry forming	VALID ✓

✦ COMMITMENT ✦

"I will only trade when I can clearly identify the trend using the Moving Averages. A flat or tangled MA means no trade — no exceptions."

YOUR SIGNATURE

DATE

CHAPTER 03

Three lines that reveal price range, volatility, and when the market is overextended.

THE THREE BANDS

UPPER BAND — THE CEILING	MIDDLE BAND — CENTER LINE	LOWER BAND — THE FLOOR
Where price is getting expensive. When price reaches here, it's overextended.	The moving average — the market's center of gravity and trend direction.	Where price is getting cheap. When price reaches here, it's stretched low.

CHART — CRASH 500 M30 SHOWING BOLLINGER BAND STRUCTURE

LIVE CHART: BOLLINGER BANDS STRUCTURE

Crash 500 Index — M30 | The three Bollinger Bands showing price boundaries

TWO ANALOGIES

RUBBER BAND

Pull it too far and it snaps back. Price does the same. Upper band = stretched high. Lower band = stretched low. Markets don't stay overextended for long.

PERSONAL SPACE

Wide bands = high activity. Tight bands = quiet market — often preparing for a big move. The 'squeeze' before the breakout is one of the most powerful signals.

BAND WIDTH AS A SIGNAL

WIDE BANDS

High volatility. Active market. Setups form fast and close fast. Stay disciplined.

TIGHT BANDS (SQUEEZE)

Quiet market — but often the calm before a big move. Pay close attention.

Is the market calm or explosive? Is price normal… or is it stretching too far?

ABEC FX SYSTEM

07

WORKBOOK · CHAPTER 03

Bollinger Bands Workbook

EXERCISE 01

Open a live chart. Describe what each Bollinger Band is doing right now.

Hint: Is the upper band rising or falling? Where is price in relation to the middle band?

PRACTICE TABLE · OBSERVE 4 DIFFERENT CHARTS AND RECORD THE BOLLINGER BAND CONDITIONS

INSTRUMENT	UPPER BAND	MIDDLE BAND	LOWER BAND	BAND WIDTH	SIGNAL?

OBSERVATION CHECKLIST · TICK WHAT IS CURRENTLY TRUE ON YOUR CHART

- ☐ Bands are WIDE — high volatility, strong movement, trade cautiously
- ☐ Bands are TIGHT — squeeze forming, potential breakout incoming
- ☐ Price at UPPER band — overextended high, look for reversal or exit long
- ☐ Price at LOWER band — overextended low, look for reversal or exit short
- ☐ Middle band is FLAT — ranging market, no entry signal, stay out

REFLECTION · Take your time with this.

Think of a time when you entered a trade without checking if the market was overextended. What happened? How would Bollinger Bands have helped you?

✦ COMMITMENT ✦

"I will always check the Bollinger Bands before entering. Wide bands mean caution. Tight bands mean preparation. Overextended price means I wait — not chase."

YOUR SIGNATURE

DATE

CHAPTER 04

How to Identify Trend Direction

Professionals don't predict. They read what the market is already saying.

The middle Bollinger Band quietly tells you the current trend direction — simply through the direction it is curving. Think of it like a road.

UPTREND — MIDDLE BAND CURVING UP

The middle Bollinger Band is curving upward. Current price is floating above it. Bullish structure — trade Crash.

UPTREND CHART

Boom 300 Index — M15 | Clear uptrend: middle BB curving upward, price above it

DOWNTREND — MIDDLE BAND CURVING DOWN

The middle Bollinger Band is curving downward. Current price is sinking below it. Bearish structure — trade Boom.

DOWNTREND CHART

Crash 150 Index — M15 | Clear downtrend: middle BB curving downward

SIDEWAYS — FLAT MIDDLE BAND (NO TRADE)

SIDEWAYS CHART — SKIP THIS CHART

Volatility 75 (1s) — H1 | Sideways: flat middle band, price oscillating both ways

CONDITION	SIGNAL	ACTION
Middle band UP + price above	UPTREND ↑	Trade Crash (Buy)
Middle band DOWN + price below	DOWNTREND ↓	Trade Boom (Sell)
Flat band + price crossing both ways	SIDEWAYS	Close chart — No Trade

WORKBOOK · CHAPTER 04

Trend Identification Workbook

IDENTIFICATION DRILL · OPEN 5 CHARTS. USE ONLY THE MIDDLE BOLLINGER BAND TO IDENTIFY THE TREND

INSTRUMENT	TIMEFRAME	MIDDLE BB DIRECTION	PRICE ABOVE/BELOW?	TREND = ?	TRADE? Y/N

EXERCISE 02

Out of the 5 charts you checked — how many were sideways? Why must you skip sideways charts?

Hint: Think about what happens to price when there's no clear direction

SCENARIO TEST · Identify the correct trend for each scenario:

A	Middle BB curving up, price consistently above it, candles printing higher highs	VALID ✓
B	Middle BB sloping downward, blue MA below the band, price below the band	VALID ✓
C	Middle BB completely flat, price zigzagging above and below it every few candles	INVALID ✗
D	Middle BB curving up but price is currently below the band — conflicting signals	INVALID ✗

REFLECTION · Take your time with this.

If you had used trend identification consistently in your past trades — which losing trades would you have avoided? Be specific if you can.

✦ COMMITMENT ✦

"I will identify the trend using the middle Bollinger Band before every single trade. Flat band = no trade. No exceptions, no matter how tempting the setup looks."

YOUR SIGNATURE

DATE

CHAPTER 05

A valid setup is not a feeling. It is a series of confirmed conditions — all aligned.

CONDITION 1 — SMA/EMA CROSSOVER

BOOM CHART (SELL)

Blue stays BELOW red, both curving downward — valid downtrend.

CRASH CHART (BUY)

Blue stays ABOVE red, both curving upward — valid uptrend.

CONDITION 2 — EMA + MIDDLE BOLLINGER BAND CROSSOVER

BOOM CHART

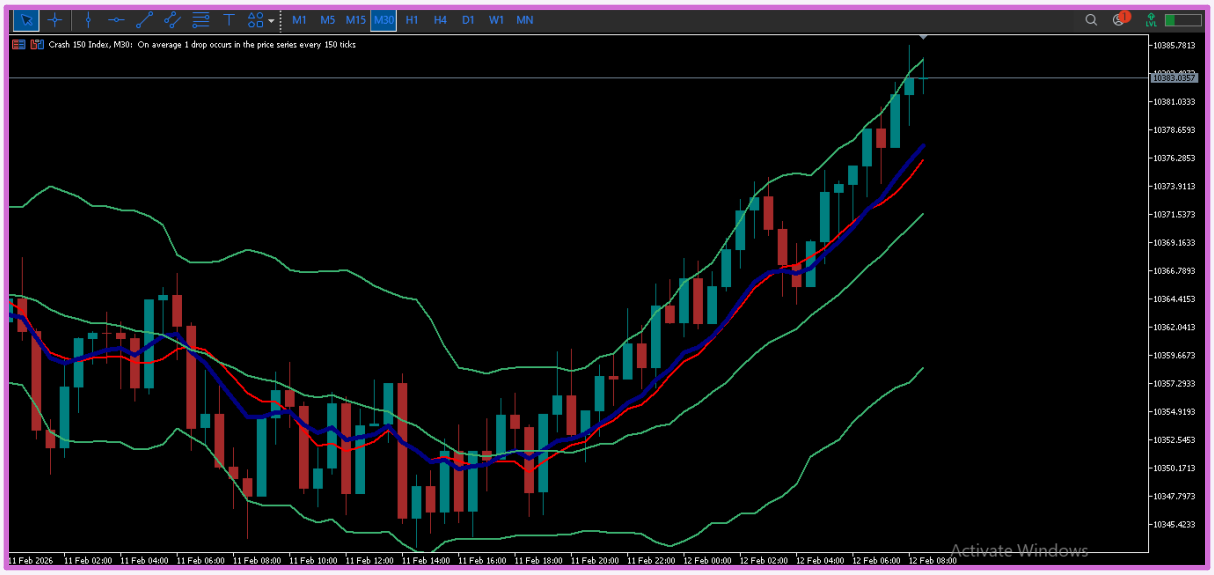

Middle BB must be BELOW the blue MA — wait for blue to drop below before entering.

CRASH CHART

Middle BB must be ABOVE the blue MA — wait for blue to rise above before entering.

VALID TRADE SETUP — CRASH CHART

VALID CRASH TRADE SETUP

Crash 150 Index — M30 | Blue MA above Red MA and above Middle BB — valid Crash entry

VALID TRADE SETUP — BOOM CHART

VALID BOOM TRADE SETUP

Boom 600 Index — M30 | Blue MA below Red MA and below Middle BB — valid Boom entry

CONDITION 3 — OUTER BOLLINGER BAND EXIT

CRASH: EXIT	BOOM: EXIT
Price touches UPPER band — secure profit, exit.	Price touches LOWER band — take profit, exit.

ADDITIONAL TRADING LAWS

01

02

03

04

WORKBOOK · CHAPTER 05

Entry Conditions Workbook

EXERCISE 01

List every condition that must be true before entering a BOOM trade (sell). In the correct order.

Hint: There are at least 3 distinct conditions — don't skip any

EXERCISE 02

List every condition that must be true before entering a CRASH trade (buy).

12

SUMMARY TABLE · FILL IN THE REQUIREMENT FOR EACH CONDITION FOR BOTH BOOM AND CRASH

CONDITION	BOOM REQUIREMENT	CRASH REQUIREMENT
SMA/EMA Crossover		
EMA vs Middle BB		
Band Exit Signal		
Trend Direction		

SCENARIO TEST · Which of these setups is VALID for entry?

A Blue above Red MA, Blue above Middle BB, all curving up — entering Crash — VALID ✓

B	Blue below Red MA but Middle BB still above Blue — entering Boom now	INVALID ✗
C	Both MAs curving down, Blue below everything — entering Boom	VALID ✓
D	Blue MA just touched Middle BB but hasn't fully crossed yet — entering Crash	INVALID ✗

REFLECTION · Take your time with this.

What is the most important thing you learned in this chapter that changes how you will approach a trade setup? Why?

✦ COMMITMENT ✦

"I will wait for ALL conditions to be confirmed before entering any trade. One missing condition = no trade. Speed is not my edge — precision is."

CHAPTER 06

Beginners Boom & Crash Trade Entry Checklist

A checklist is not a crutch. It is the discipline of professionals.

Use this checklist before every trade. If any box cannot be ticked — do not enter.

PRE-TRADE VERIFICATION

- [ ] Open chart on M30 or H1
- [ ] Middle BB curving UP (uptrend) or DOWN (downtrend) — NOT flat
- [ ] Trend confirmed: UP or DOWN
- [ ] Instrument matches the trend (Boom=Down, Crash=Up)
- [ ] Both MAs curving in the same direction as the trend

BOOM ENTRY — CONFIRMED WHEN:

BOOM ENTRY CHECKLIST CHART

Boom 600 Index — M30 | All MAs curving down, Blue below everything — valid Boom entry

BOOM — BLUE MUST BE BELOW EVERYTHING

✓ All MAs curving downward ✓ Blue MA below Middle BB ✓ Blue MA below Red MA → Enter sell trade.

CRASH — BLUE MUST BE ABOVE EVERYTHING

✓ All MAs curving upward ✓ Blue MA above Middle BB ✓ Blue MA above Red MA → Enter buy trade.

CRASH ENTRY — CONFIRMED CHART:

CRASH ENTRY CHECKLIST CHART

Crash 500 Index — H1 | All MAs curving up, Blue above everything — valid Crash entry

• Trend not clear • Middle BB is flat • Moving averages not aligned **No confirmation = No trade. Full stop.**

Beginner Checklist — Live Application Workbook

LIVE DRILL · APPLY THE CHECKLIST TO A REAL CHART RIGHT NOW — TICK AND FILL IN EACH LINE

- [ ]
- [ ]
- [ ]
- [ ]
- [ ]
- [ ]
- [ ]

EXERCISE Decision

TRADE LOG · USE THIS TABLE TO LOG YOUR NEXT 5 SETUPS — TRACK YOUR CHECKLIST DISCIPLINE

DATE	INSTRUMENT	TREND	BLUE POSITION	ENTRY VALID?	DECISION

REFLECTION · Take your time with this.

EXERCISE Bonus

✦ COMMITMENT ✦

"I will run through the full checklist before every single trade. No checklist = no trade. My discipline is what separates me from a gambler."

CHAPTER 07

Stop Loss Rules

A stop loss is not an admission of failure. It is the professional's most important tool.

On Boom and Crash, we don't set random stop loss parameters. Your stop loss must be controlled — either by the guide below, or by actively monitoring and closing the moment it hits your limit.

STOP LOSS GUIDE

LOT SIZE	MAXIMUM STOP LOSS (IN USD)
0.2 lot	$5
0.5 – 1.0 lot	$10

> **This is not a suggestion. It is a rule.** Once your loss hits the limit, you close. No hoping. No emotional holding. No 'it will come back.' You close and move on.

ACCOUNT SIZE PROTECTION

For accounts with $50 – $100 equity, stop loss must stay between $5 – $10 maximum. Never risk more than 10% of your capital per trade. Protect the account first.

WHY DEFINING SL BY LOT SIZE WORKS

Defining your stop loss by lot size keeps your risk per trade under control. You know what you're willing to lose *before* you enter — so you hold with confidence, not fear. That psychological clarity is worth more than most strategies.

We will take losses. But we make more than we lose. The goal is consistency — more wins than losses.

ABEC FX

Protect your account. Opportunities are endless. Capital is not.

WORKBOOK · CHAPTER 07

Stop Loss Discipline Workbook

EXERCISE 01

Hint: Equity × 10% = maximum risk per trade

RISK CALCULATION TABLE · STUDY THE EXAMPLES, THEN FILL IN YOUR OWN ROW

ACCOUNT EQUITY	MAX RISK (10%)	LOT SIZE TO USE	SL IN USD
$50	$5	0.2	$5
$100	$10	0.5	$10
My account: ___	___	___	___

REFLECTION · Take your time with this.

EXERCISE 03

Hint: Example: 'I will close any trade immediately when my loss reaches $___ regardless of how I feel.'

SCENARIO TEST · Which stop loss behaviour is CORRECT?

A	Loss hits $5 on 0.2 lot — trader immediately closes the position	VALID ✓
B	Loss reaches $8 on 0.2 lot — trader holds, hoping price will reverse	INVALID ✗
C	Loss hits $10 on 1.0 lot — trader closes, logs the trade, moves on	VALID ✓
D	Trader has no stop loss set, managing 'by eye' — loses $25 on a 0.5 lot	INVALID ✗

REFLECTION · Take your time with this.

✦ COMMITMENT ✦

"I will always define my stop loss BEFORE entering any trade. Once my loss reaches my limit, I close — no exceptions, no negotiations with myself."

YOUR SIGNATURE

DATE

CHAPTER 08

Price doesn't move randomly. It moves between zones — and knowing those zones is your edge.

THE THREE RETEST ZONES

UPPER BAND — CEILING

Price reaching here signals overextension high. Expect bounce or reversal.

MIDDLE BAND — BALANCE

Center of gravity. Price frequently returns here after touching either outer band.

LOWER BAND — FLOOR

Price reaching here signals overextension low. Expect bounce or reversal upward.

PREDICTABLE STRUCTURE CHART

RETEST ZONE STRUCTURE

Crash 500 Index — M30 | Price bouncing between the Bollinger Band boundaries

HOW PRICE BEHAVES AT RETEST ZONES

BOUNCE BEHAVIOR	BREAKOUT BEHAVIOR
Price hits a BB zone and reverses direction. Trend reacting — possible change.	Price pushes through and beyond the outer band. Trend continuing with strong momentum.

BOUNCE (REVERSAL) CHART

BOUNCE BEHAVIOR

Boom 900 Index — H1 | Price reversing at the Bollinger Band zone — classic bounce

BREAKOUT CHART

BREAKOUT BEHAVIOR

Jump 10 Index — M30 | Price breaking through the outer band — trend continuation

HOW TO USE RETEST ZONES

01

02

03

Retest zones tell you WHERE the trend might pause or reverse. Use them to set TP and manage trades with precision.

WORKBOOK · CHAPTER 08

Retest Zones Workbook

EXERCISE 01

Hint: Is price near the upper, middle, or lower band? What does that suggest?

RETEST ZONE OBSERVATION TABLE · RECORD 4 LIVE CHARTS

INSTRUMENT	PRICE NEAR WHICH BAND?	BOUNCE OR BREAKOUT?	TP TARGET?	YOUR ACTION

REFLECTION · Take your time with this.

EXERCISE 03

Hint: Think about whether price is going up or down, and which band it's heading toward

CONFIDENCE CHECK · TICK ONLY WHAT YOU GENUINELY UNDERSTAND

- ☐
- ☐
- ☐
- ☐

✦ COMMITMENT ✦

"I will use Bollinger Band retest zones to set my TP on every trade. I will not hold beyond the outer band out of greed. The zone tells me when to exit — I will listen."

YOUR SIGNATURE

DATE

CHAPTER 09

Higher Timeframe Analysis (H4 & D1)

The bigger the timeframe, the louder the signal. Always know what the senior charts are saying.

When price is near Bollinger Band edges, always check the bigger picture. Higher timeframes tell you how price is likely to behave at a retest zone before you commit.

THE TWO-STEP PROCESS

01	Check the H4 trend — does it match your M30/H1 direction?
02	Check the D1 trend — is it also aligned with your main chart?

ALIGNMENT RULES

HIGHER TF ALIGNS ✓

H4 or D1 matches your M30/H1 trend → expect a BB breakout. Trade with more confidence. Hold longer.

HIGHER TF DOES NOT ALIGN ■

Setup may still be valid — enter, but monitor closely and manage aggressively. Don't hold as long.

THE TRAFFIC LIGHT SYSTEM

■ GREEN	■ YELLOW	■ RED
Both H4 and D1 align — full confidence. Expect a strong breakout.	One TF aligns — go, but stay alert and manage actively.	Higher TFs conflict — skip or manage with extreme caution.

CASE STUDY — BOOM 1000: H1 + H4 + D1

Below is a live multi-timeframe analysis on Boom 1000. The H1 chart shows price touching the lower Bollinger Band. Before entering, we check H4 and D1.

H1 ENTRY CHART

Boom 1000 — H1 | Price at lower BB retest zone — checking higher TFs before entry

H4 HIGHER TIMEFRAME

Boom 1000 — H4 | Strong downtrend confirmed — aligns with H1 setup

D1 DAILY TIMEFRAME

Boom 1000 — D1 | Daily also shows strong downtrend — triple alignment

Decision: Despite H1 touching the lower band, H4 and D1 both show strong downtrend and are not at retest zones — we confidently enter the Boom trade. All three timeframes aligned.

Higher TF free → expect strong breakout. Higher TF at retest → expect resistance → manage carefully.

ABEC FX MEMORY RULE

WORKBOOK · CHAPTER 09

Higher Timeframe Analysis Workbook

EXERCISE 01

Hint: Note the direction on each timeframe and whether they agree with your entry chart

TOP-DOWN ANALYSIS TABLE · PRACTICE MULTI-TIMEFRAME ANALYSIS ON 3 LIVE CHARTS

INSTRUMENT	M30/H1 TREND	H4 TREND	D1 TREND	ALIGNED?	CONFIDENCE LEVEL	ENTER?

TRAFFIC LIGHT DECISION · BASED ON YOUR ANALYSIS, WHICH SITUATION APPLIES TO YOUR CURRENT CHART?

- ☐
- ☐
- ☐
- ☐

REFLECTION · Take your time with this.

EXERCISE 03

Hint: Think about probability — what does agreement between timeframes actually mean?

✦ COMMITMENT ✦

"I will always check at least H4 before entering a trade. When price is near a Bollinger Band edge, I will check D1 as well. No shortcuts on higher timeframe analysis."

YOUR SIGNATURE

DATE

CHAPTER 10

The complete, professional-grade checklist. Every step. Every time. No shortcuts.

FULL PRO CHECKLIST

1 **TIMEFRAME**
Open chart on M30 or H1

2 **TREND ID**
Middle BB curving UP or DOWN. Flat = skip immediately.

3 **INSTRUMENT RULE**
Boom = Downtrend only. Crash = Uptrend only. Wrong match = close chart.

4 **MA CONFIRMATION**
Boom: Blue below MBB and Red MA. Crash: Blue above MBB and Red MA.

5 **PRICE AT BB EDGE?**
If YES → run Top-Down Analysis on H4 and D1 before entering.

6 **H4 & D1 CHECK**
Higher TF aligns = confidence, hold longer. Doesn't align = manage aggressively.

• Trend not clear • Middle BB flat • MAs not aligned **No confirmation = No trade.**

Pro Checklist — Full Trade Walkthrough Workbook

FULL WALKTHROUGH · Apply every step of the Pro Checklist to a live chart right now.

STEP 1 — TIMEFRAME

M30 / H1 · Instrument: _____

STEP 2 — TREND

Middle BB direction: _____ (Up / Down / Flat — if flat, STOP here)

STEP 3 — INSTRUMENT RULE

Trend matches instrument? _____ (Yes / No — if No, STOP)

STEP 4 — MA CONFIRMATION

Blue MA: _____ (above / below) Red MA and Middle BB

STEP 5 — PRICE AT BB EDGE?

_____ (Yes / No) → If Yes, run Steps 6 & 7 before entering

STEP 6 — H4 TREND

Direction: _____ Aligns with my chart? _____ (Yes / No)

STEP 7 — D1 TREND

Direction: _____ Aligns with my chart? _____ (Yes / No)

STEP 8 — FINAL DECISION

Action: _____ (Enter / Skip) · Reason: _____

REFLECTION · Take your time with this.

✦ COMMITMENT ✦

"I will use the full Pro Checklist on every single trade — no shortcuts, no skipped steps. Discipline is my competitive advantage in the market."

YOUR SIGNATURE

DATE

CHAPTER 11

Risk Management & Trading Psychology

If you don't know how to control your losses, the market will teach you the hard way.

Risk management means managing your losses, controlling your emotions, and sticking to your plan so one bad trade doesn't damage your account.

THE TEN RULES OF TRADING DISCIPLINE

01	Always have a trading plan. Know why you're entering and where you're exiting — before you touch the market.
02	Keep learning and sharpening your skills. The market evolves, and so should you.
03	Trade only with money you can afford to lose. Never put yourself under financial pressure.
04	Set realistic profit expectations. Consistency beats chasing big wins every time.
05	Always use a Stop Loss. Capital protection is priority number one.
06	Secure your profits. Take profit when it makes sense. Use trailing stops to protect gains.
07	Respect leverage. It can grow your account fast — but drain it faster if misused.
08	Control your emotions. Fear and greed are the most expensive habits in this business.
09	Don't overexpose one setup. Be strategic with how you distribute your risk.
10	Hope for the best, but always prepare for the worst. Think in probabilities, not guarantees.

BEFORE EVERY TRADE — CALCULATE THESE

RISK PER TRADE Know the exact dollar amount you're willing to lose. Non-negotiable.	**LOT SIZE MATCH** Your lot size must match your risk tolerance. Never oversize.

POSITION SIZING Your position must respect your equity. Protect the account first.	**ACCOUNT LONGEVITY** Your account should survive 5–10 losses without being wiped out.

In trading, survival is what leads to profitability. Trade smart. Protect your capital. Stay consistent.

ABEC FX

WORKBOOK · CHAPTER 11

Risk Management & Psychology Workbook

EXERCISE 01

Hint: Be brutally honest — the one that's hardest to follow consistently

EXERCISE 02

RISK PROFILE TABLE · CALCULATE YOUR PERSONAL RISK PARAMETERS

ACCOUNT EQUITY	MAX RISK (10%)	LOT SIZE	MAX SL	TRADES TO SURVIVE 5 LOSSES
My Account: ___	___	___	___	___

HONEST SELF-RATING · Rate yourself in each area (1 = Needs serious work · 5 = Consistently strong)

STICKING TO MY TRADE PLAN WITHOUT DEVIATION	1	2	3	4	5
RESPECTING MY STOP LOSS EVERY TIME, NO EXCEPTIONS	1	2	3	4	5
CONTROLLING GREED AFTER A WINNING TRADE	1	2	3	4	5

AVOIDING REVENGE TRADES AFTER A LOSS	1	2	3	4	5
TAKING PROFIT AT THE RIGHT MOMENT — NOT TOO EARLY, NOT TOO LATE	1	2	3	4	5
KEEPING EMOTIONS SEPARATE FROM TRADING DECISIONS	1	2	3	4	5

REFLECTION · Take your time with this.

✦ COMMITMENT ✦

"I will protect my capital above all else. I will respect my stop loss on every trade — no emotional holding, no revenge trading. Consistency is my strategy."

YOUR SIGNATURE

DATE

CHAPTER 12

Volatility controls your risk. The more volatile the index, the more disciplined you must be.

Important Warning: This list can change at any time. Always verify the latest specifications from your broker before placing any trade.

■ VERY VOLATILE — TRADE WITH EXTRA CAUTION

INSTRUMENT	RECOMMENDED LOT SIZE
Volatility 100 Index	0.50
Volatility 75 Index	0.001
Volatility 50 (1s)	0.005
Volatility 25 (1s)	0.005
Volatility 50 Index	4.00
Volatility 250 (1s)	0.005
Jump 25	0.01
Jump 75	0.01
Boom 1000	0.20
Boom 300	0.50

Crash 300	0.50
Step Index	0.10
Crash 600	0.20
Crash 900	0.20

On these pairs — reduce greed, respect your stop loss, and secure profits early.

■ LESS VOLATILE — BALANCED MOVEMENT

INSTRUMENT	RECOMMENDED LOT SIZE
Volatility 25	0.50
Volatility 100 (1s)	0.20
Volatility 75 (1s)	0.05
Volatility 10 (1s)	0.50
Jump 50	0.01
Crash 1000	0.20
Crash 500	0.20
Boom 900	0.20
Boom 600	0.20
Boom 500	0.20

Cleaner setups — but risk management still fully applies.

■ LOWER VOLATILITY — MORE STABLE (NEVER RISK-FREE)

INSTRUMENT	RECOMMENDED LOT SIZE
Volatility 10	0.50

Volatility 150 (1s)	0.01
Jump 10	0.01
Jump 100	0.01
Crash 150	0.50
Boom 150	0.50

Stability does not mean safety. Always trade with confirmation.

ABEC FX FINAL PRINCIPLE

WORKBOOK · CHAPTER 12

Volatility & Lot Size Application Workbook

EXERCISE 01

MY PERSONAL TRADING PLAN · FILL IN YOUR TWO CHOSEN INSTRUMENTS

INSTRUMENT	VOLATILITY LEVEL	MY LOT SIZE	MAX SL	EXPECTED TP ZONE
My Boom pair: ___				
My Crash pair: ___				

EXERCISE 02

Hint: Think about account longevity and the cost of blowing your account vs. consistent small wins

VOLATILITY DISCIPLINE CHECKLIST · TICK ONLY WHAT YOU GENUINELY COMMIT TO

- ☐
- ☐
- ☐

REFLECTION · Take your time with this.

✦ COMMITMENT ✦

"I will match my lot size to the volatility of the instrument and the size of my account — every time. Greed does not change my lot size. Discipline does."
